You can now run the crystal report app easily. How to include Runtime in the application setting? In the application setup project to set up the application, you can include the start time of the crystal report. To do this, you must download the merge module (MSM). The merge module is a windows installer package, but cannot be installed on its own. You can include it in a visual studio setup project and create a single installation file that includes the application startup time and crystal report. You can then split the app setting. Then you do not need to download and install the time of implementation of the crystal report separately on the client machinery. You can search for an article on how to include the Merge Module (MSM) in your project setting from the following link Using Crystal Reports Merge MODULES MSM to create a setup project Crystaldecisions.crystalreports.engine.dll dosyasının boyutu 0.41 MB'dir.
